Phase 1: Problem Identification (Week 1)

Telangana Tourism Analysis

1. Problem Statement

Telangana has a wide range of historical, cultural, religious, and natural tourist destinations. However, tourism information and visitor data can be difficult to understand when it is spread across different datasets and sources. This makes it harder for tourism departments, businesses, travelers, and researchers to identify visitor trends, compare domestic and foreign tourism, understand popular destinations, and explore tourism patterns across the state. The Telangana Tourism Analysis project aims to analyze tourism data and present it through an easy-to-understand interactive dashboard so that users can identify important patterns, explore destinations, and make better data-driven decisions.

2. Target Users

- **Tourism Department and Government Authorities** – To monitor tourism performance and support tourism planning.
- **Tourism Businesses** – Hotels, travel operators, local businesses, and service providers can understand tourism demand.
- **Travelers and Tourists** – To discover important destinations, view place information, and explore locations through the map.
- **Researchers and Students** – To study tourism trends, visitor patterns, destinations, and tourism data.
- **Local Communities** – To understand tourism activity and support local tourism opportunities.

3. Expected Dashboard

The dashboard will provide interactive visualizations and summaries that help users understand Telangana tourism patterns quickly.

- **Tourist Trends** – Monthly and yearly visitor trends with comparisons between years.
- **Domestic vs Foreign Analysis** – Comparison of domestic and foreign tourist visits.
- **Destination Analysis** – Comparison and ranking of important tourist places in Telangana.
- **District-wise Exploration** – Explore tourist destinations based on districts.
- **Interactive Tourism Map** – A map showing tourist and historical destinations with separate symbols.
- **Place Information** – Images, descriptions, history, category, and location details for selected places.
- **Revenue Analysis** – Visualization of tourism revenue and its changes over time.
- **Reports and Insights** – Summary statistics and key observations generated from the tourism data.

4. Expected Outcome

The project is expected to transform raw Telangana tourism data into meaningful insights through data analysis and visualization. The dashboard will help users understand domestic and foreign visitor patterns, identify popular tourist destinations, compare tourism trends over time, explore districts and places through an interactive map, and access useful destination information. The final solution will provide a clear and user-friendly platform that supports tourism analysis, destination discovery, and data-driven decision making.

Project Area	Expected Result
Visitor Analysis	Compare domestic and foreign visitors and observe tourism trends.
Destination Analysis	Identify and compare popular tourist destinations.
Map Visualization	Explore Telangana districts and destinations interactively.
Place Explorer	View images, history, category and location information.
Decision Support	Convert tourism data into clear insights for stakeholders.
